abbrev        0
dtype: int64
```

SCATTER PLOT

In [10]:

```
sns.scatterplot(x="alcohol", y="total", data=dset)
plt.title("Scatterplot: Alcohol vs Total Crashes")
plt.xlabel("Alcohol Consumption")
plt.ylabel("Total Crashes")
```

Out[10]:

```
Text(0, 0.5, 'Total Crashes')
```

Inference: Positive correlation between alcohol consumption and total crashes from the above plot, i.e as the alcohol consumption increases the total crashes increases.

In [11]:

```
sns.scatterplot(x="speeding", y="total", data=dset)
plt.title("Scatterplot: Speeding vs Total Crashes")
plt.xlabel("Speeding")
plt.ylabel("Total Crashes")
```

Out[11]:

```
Text(0, 0.5, 'Total Crashes')
```

Inference: Speeding doesn't show a clear linear trend with total crashes.

LINE PLOT

In [12]:

```
sns.lineplot(x="alcohol", y="total", data=dset)
plt.title("Lineplot: Alcohol vs Total Crashes")
plt.xlabel("Alcohol Consumption")
plt.ylabel("Total Crashes")
```

Out[12]:

```
Text(0, 0.5, 'Total Crashes')
```

Inference: No obvious linear trend in the relationship between alcohol consumption and total crashes.

In [13]:

```
sns.lineplot(x="speeding", y="total", data=dset)
plt.title("Lineplot: Speeding vs Total Crashes")
plt.xlabel("Speeding")
plt.ylabel("Total Crashes")
```

Out[13]:

```
Text(0, 0.5, 'Total Crashes')
```

Inference: Speeding doesn't exhibit a consistent linear relationship with total crashes.

DISTRIBUTION PLOT

In [14]:

```
sns.histplot(dset["not_distracted"], kde=True)
plt.title("Distplot: Not Distracted")
plt.xlabel("Not Distracted")
```

Out[14]:

```
Text(0.5, 0, 'Not Distracted')
```

Inference: The distribution of "not_distracted" values is right-skewed

In [15]:

```
sns.histplot(dset["alcohol"], kde=True)
plt.title("Distplot: Alcohol Consumption")
plt.xlabel("Alcohol Consumption")
```

Out[15]:

```
Text(0.5, 0, 'Alcohol Consumption')
```

Inference: The distribution of alcohol consumption appears to be right-skewed as well

BOX PLOT

In [16]:

```
sns.boxplot(x="alcohol", y="total", data=dset)
plt.title("Boxplot: Alcohol vs Total Crashes")
plt.xlabel("Alcohol Consumption")
plt.ylabel("Total Crashes")
```

Out[16]:

```
Text(0, 0.5, 'Total Crashes')
```

Inference: The boxplot shows the distribution of total crashes for different levels of alcohol consumption. The lines indicates the outliers

In [17]:

```
sns.boxplot(x="speeding", y="total", data=dset)
plt.title("Boxplot: Speeding vs Total Crashes")
plt.xlabel("Speeding")
plt.ylabel("Total Crashes")
```

Out[17]:

```
Text(0, 0.5, 'Total Crashes')
```

Inference: The boxplot illustrates the distribution of total crashes for different levels of speeding. The lines indicate the outliers.

BAR PLOT

In [18]:

```
sns.barplot(x="alcohol", y="total", data=dset)
plt.title("Barplot: Alcohol vs Total Crashes")
plt.xlabel("Alcohol Consumption")
plt.ylabel("Total Crashes")
```

Out[18]:

```
Text(0, 0.5, 'Total Crashes')
```

Inference: The barplot displays the mean total crashes for different levels of alcohol consumption. So, if the alcohol consumption is high, then total crashes are also high.

In [19]:

```
sns.barplot(x="speeding", y="total", data=dset)
plt.title("Barplot: Speeding vs Total Crashes")
plt.xlabel("Speeding")
plt.ylabel("Total Crashes")
```

Out[19]:

```
Text(0, 0.5, 'Total Crashes')
```

Inference: The barplot shows the mean total crashes for different levels of speeding. The crashes are high even at low speed levels also.

JOINT PLOT

In [20]:

```
sns.jointplot(x="alcohol", y="total", data=dset, kind="scatter")
plt.suptitle("Jointplot: Alcohol vs Total Crashes", y=1.02)
```

Out[20]:

```
Text(0.5, 1.02, 'Jointplot: Alcohol vs Total Crashes')
```

Inference: The plot in the jointplot reveals the relationship between alcohol consumption and total crashes. So, as the alcohol increases, the total crashes also increase.

In [21]:

```
sns.jointplot(x="speeding", y="total", data=dset, kind="scatter")
plt.suptitle("Jointplot: Speeding vs Total Crashes", y=1.02)
```

Out[21]:

```
Text(0.5, 1.02, 'Jointplot: Speeding vs Total Crashes')
```

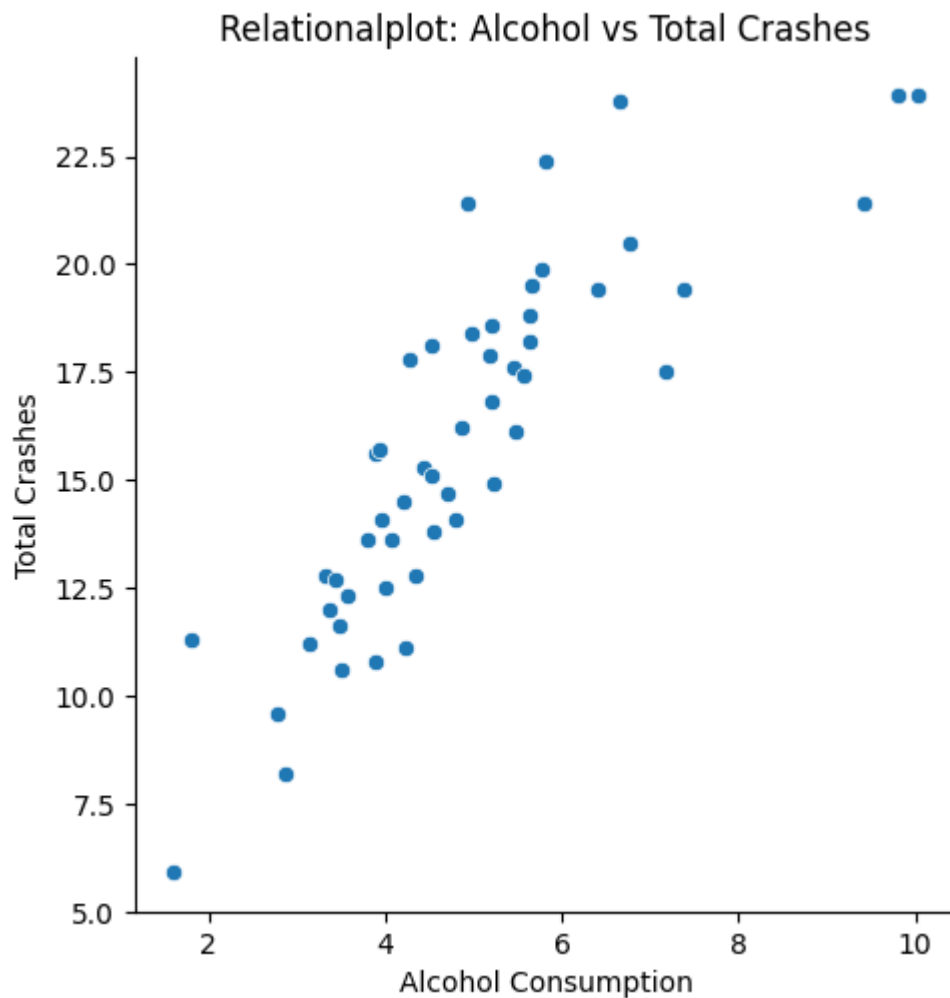

Inference: The plot in the jointplot shows the relationship between speeding and total crashes. The plot is not in a specific pattern.

In [22]:

```
sns.relplot(x="alcohol", y="total", data=dset, kind="scatter")
plt.title("Relationalplot: Alcohol vs Total Crashes")
plt.xlabel("Alcohol Consumption")
plt.ylabel("Total Crashes")
```

Out[22]:

```
Text(0.6944444444444446, 0.5, 'Total Crashes')
```

Inference: The plot in the relationalplot visualizes the relationship between alcohol consumption and total crashes and it is directly proportional.

RELATION PLOT¶

In [23]:

```
sns.relplot(x="speeding", y="total", data=dset, kind="scatter")
plt.title("Relationalplot: Speeding vs Total Crashes")
plt.xlabel("Speeding")
plt.ylabel("Total Crashes")
```

Out[23]:

```
Text(0.6944444444444446, 0.5, 'Total Crashes')
```
