▼ NumPy Exercises

Now that we've learned about NumPy let's test your knowledge. We'll start off with a few simple tasks, and then you'll be asked some more complicated questions.

▼ Import NumPy as np

```
import numpy as np
```

▼ Create an array of 10 zeros

```
np.zeros(10) 
 array([0., 0., 0., 0., 0., 0., 0., 0., 0., 0.])
```

Create an array of 10 ones

```
np.ones(10) 
 array([1., 1., 1., 1., 1., 1., 1., 1., 1.])
```

```
np.ones(10)*5 
 array([5., 5., 5., 5., 5., 5., 5., 5., 5.])
```

▼ Create an array of the integers from 10 to 50

```
np.arange(10,51,1)

array([10, 11, 12, 13, 14, 15, 16, 17, 18, 19, 20, 21, 22, 23, 24, 25, 26, 27, 28, 29, 30, 31, 32, 33, 34, 35, 36, 37, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47, 48, 49, 50])
```

▼ Create an array of all the even integers from 10 to 50

```
np.arange(10,51,2)

array([10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40, 42, 44, 46, 48, 50])
```

▼ Create a 3x3 matrix with values ranging from 0 to 8

Create a 3x3 identity matrix

Use NumPy to generate a random number between 0 and 1

```
np.random.rand()
     0.6356784918090035

np.random.rand(0,1,2)
     array([], shape=(0, 1, 2), dtype=float64)
```

▼ Use NumPy to generate an array of 25 random numbers sampled from a standard normal distribution

```
np.random.rand(1,25)

array([[0.08189892, 0.91321296, 0.62582849, 0.43474859, 0.9561997, 0.73029051, 0.27440609, 0.52173031, 0.56674215, 0.78907473, 0.80115984, 0.56857551, 0.97376838, 0.65157355, 0.69747371, 0.99840901, 0.1423479, 0.88353431, 0.6639043, 0.25576772, 0.24429217, 0.32346666, 0.64469187, 0.97017042, 0.87189379]])
```

Create the following matrix:

▼ Create an array of 20 linearly spaced points between 0 and 1:

```
np.linspace(0,1,20)

array([0. , 0.05263158, 0.10526316, 0.15789474, 0.21052632, 0.26315789, 0.315789474, 0.36842105, 0.42105263, 0.47368421, 0.52631579, 0.57894737, 0.63157895, 0.68421053, 0.73684211, 0.78947368, 0.84210526, 0.89473684, 0.94736842, 1. ]
```

Numpy Indexing and Selection

Now you will be given a few matrices, and be asked to replicate the resulting matrix outputs:

```
9/4/23, 10:31 AM
```

- ▼ Now do the following
- ▼ Get the sum of all the values in mat

```
mat.sum()
325
```

▼ Get the standard deviation of the values in mat

```
mat.std()
7.211102550927978
```

▼ Get the sum of all the columns in mat

```
np.sum(mat,axis=1)
np.sum(mat,axis=0)
array([55, 60, 65, 70, 75])
```
